Rogue WiFi Networks

Hackers will sometimes set up rogue WiFi networks that masquerade as legitimate networks in order to potentially steal information from users who connect to it.

Packet Sniffer

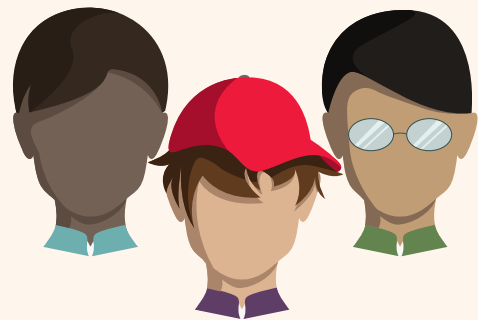

A sniffer program targets packets of data being transmitted over unsecured WiFi networks.

Social Hacking

An example of social hacking is when a hacker may leave a malicious USB on a café table for unsuspecting, curious customers.

When the USB is inserted into their device, the hacker can then gain access to sensitive information on the device with malware.

Man-in-the-Middle Attacks

This form of cyberattack is when a hacker alters the communication between two parties who believe they are communicating directly with one another.
